A charity sends an appeal letter to 3000 people.
The letter asks for a donation of money.

Here is some information about the last appeal letter the charity sent out.

\[ \frac{1}{2} \text{ of the people who were sent the letter made a donation.} \]

The average donation was £8.60

\[ \frac{1}{3} \text{ of the people who made a donation filled in a tax form.} \]

24 The diagrams show the position of a tap when off and fully on. The tap is fully on when the angle of turn is 180°.

When fully on, water flows out of the tap at 14 litres per minute. The rate at which water flows out is in direct proportion to the angle of turn. The tap is turned 135°.

The water flows into a tank with a capacity of 79.8 litres.

Will it take less than \(7\frac{1}{2}\) minutes to fill the tank?
